This is a mirror of http://www.vim.org/scripts/script.php?script_id=931

This is an IRC client which runs on Vim. It has some of the features
IRC users might expect, such as multiple servers connectivity, DCC
SEND/CHAT features etc.. Read the plugin file for more feature info and
usage instructions.

For those who are unfamiliar with IRC in general, I recommend visiting
this site first: http://www.irchelp.org/

If you have any questions, problems, or suggestions etc., /query or
e-mail the maintainer. Do not direct them to the channel #vim please.

Here is a minimum set of knowledge required to start/exit the script:

To start it, type

:VimIRC<CR>

Then you'll be prompted for some user info (nick, full name etc.).

Upon successfull connection, try some normal commands you're familiar
with ("j", "k", "<C-W>-"things and so on). Typing "i" or "I" will let
you in to the IRC-command mode, where you can enter commands such as
"/join #vim" and messages.

To quit, just press "Q".
